PEPPER SQUARE

Full Stack Engineer Assignment

Interview question Full stack

1. Build a backend CMS with api using Strapi for a school website, below is the link to get started with strapi
   https://docs.strapi.io/dev-docs/quick-start
2. Build a react app for the above using the design provided in the figma link below,
   https://www.figma.com/file/MjY8NP0UffGOOXxasoqcG0/Untitled?type=design&node-id= 0-1&mode=design

Things to remember:

1. The events and their info must be dynamic and loaded from strapi.
2. React hooks, state management, functional components are a must have.
3. Best practices like arrow functions and folder structure gives you extra points .

s

Good luck, We look forward to your submission!
